

# Why we need a Digital Single Market

315 million  
Europeans  
use the  
Internet  
every day

## A Digital Single Market

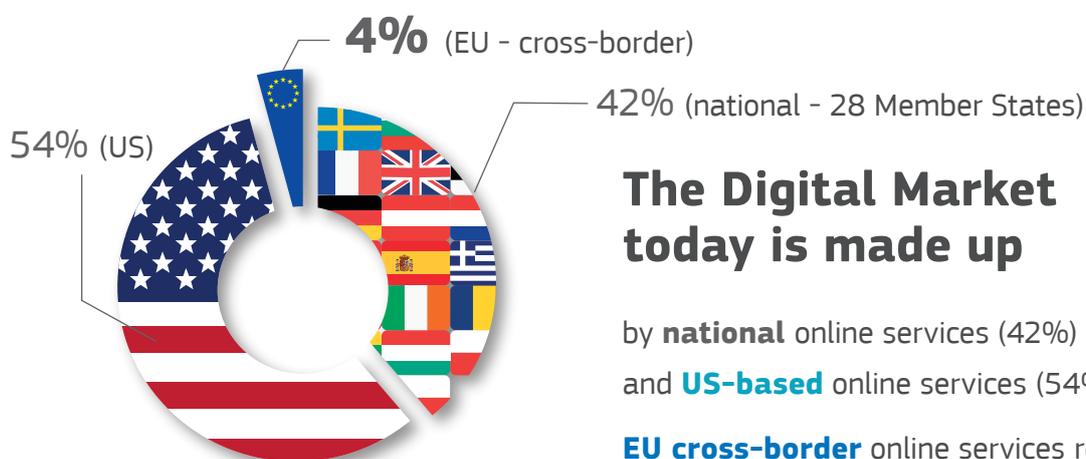

can create up to

**€415 billion** in additional growth,

**hundreds of thousands** of new jobs,

and a **vibrant knowledge-based society**

But obstacles remain to unlock this potential...

## The Digital Market today is made up

by **national** online services (42%)  
and **US-based** online services (54%)

**EU cross-border** online services represent only 4%

## SOLUTIONS NEEDED: THREE PRIORITY AREAS

# 1

## Better access for consumers and businesses to digital goods and services across Europe

### Unlocking e-commerce potential

**15% of consumers** bought online from other EU countries in 2014, while **44%** did so **domestically**

- EU consumers could **save €11.7 billion** each year if they could choose from a full range of EU goods and services when shopping online

Only **7% of SMEs** in the EU sell cross-border

Small online businesses wishing to trade in another EU country face around **€9,000 extra costs** for having to adapt to national laws

- If the same rules for e-commerce were applied in all EU Member States, **57% of companies** would either start or increase their online sales to other EU countries

### Affordable parcel delivery costs

More than **90% of e-shoppers** consider **low delivery prices** and **convenient return options** as important when buying online

**62% of companies** that are willing to sell online say that too high delivery costs are a problem

### Tackling geo-blocking

In **52% of all attempts** at cross-border orders the seller does not serve the country of the consumer

- less clients, less revenues for companies

### Simplifying VAT arrangements

Small online businesses wishing to trade in another EU country face a VAT compliance cost of at least **€5,000** annually for each Member State where it wishes to supply

### Modernising copyright

**1 in 3 Europeans** is interested in watching or listening to content from their home country **when abroad**

**1 in 5 Europeans** is interested in watching or listening to content from **other EU countries**

- An opportunity not to be missed: **Images, films or music and games** are the most popular online activities and digital spending on entertainment and media has double digit growth rates (around **12%**) for the next five years

## 2

## Shaping the right environment for digital networks and services to flourish

### Strong European data protection rules to boost the digital economy

**72% of Internet users** in Europe still worry that they are being asked for too much **personal data online**

### Rolling out fast broadband for all

Take-up of fast broadband is low: only **22.5% of all subscriptions** are fast ones (above 30Mbps) and Europe has witnessed significant time lags in the roll-out of the latest 4G technology due to the non-availability of suitable spectrum

Spectrum reforms can decrease prices of mobile services and boost productivity over time (estimated EU-wide GDP increase **between 0.11% and 0.16% over 5 years**)

59%

15%

Only **59%** of Europeans can access **4G**, dropping to **15%** in **rural areas**

## 3

## Creating a European Digital Economy and society with growth potential

### Big data and cloud

Digital data stored in cloud:  
**2013: 20% - 2020: 40%**

The use of big data by the top 100 EU manufacturers could lead to **savings worth €425 billion**

Studies estimate that, by 2020, big data analytics could boost EU economic growth by an additional **1.9%**, equalling a **GDP increase of €206 billion**

### An inclusive e-society

Almost half the EU population (**47%**) is not properly digitally skilled, yet in the near future, **90% of jobs** will require some level of digital skills

A strategy of 'digital by default' in the public sector could result in around **€10 billion of annual savings**
